

## FAQ's

### How much does the cable need to be cut before the alarm will sound?

The unique patented design of the cable is such that when the cable is cut through by 50% or more the alarm will activate.

### How secure are the products?

No security device is totally infallible against a highly determined or professional thief. Opportunistic theft accounts for over 98% of all thefts in most countries around the world. The Lock Alarm products will provide a significant deterrent factor against these opportunist thieves, as they usually choose easy or vulnerable targets and will run off at the first sound of any alarm. These are viewpoints consistently backed up by Police and security consultants.

### Can the batteries be removed to disable the alarm function?

No. The batteries are located in a tamper proof compartment, which means when the device is being used the batteries cannot be accessed by anyone except the authorised user.

### How long will batteries last?

Battery life depends on several factors such as brand/quality of batteries, frequency of product usage, environmental conditions etc. Assuming good quality Alkaline batteries are used, typically under average usage and operating conditions, they will last for 6-12 months for the products which require a 9v or AAA batteries.

Security of your valuables and personal property has always been a concern when left unattended. The need to lock up your personal property has become part of your everyday routine, whether it is your bicycle at the train station, dirt bike in your garage, sports equipment in your shed, work tools on site, fishing equipment on your boat or camping gear when on holidays.

The days of worrying about your unattended property is now over with the introduction of Lock Alarm into Australia. Lock Alarm products not only securely lock your property, they also come with an ear piercing alarm that will quickly raise the alert that someone is tampering with your property.

**So when you want to protect your property, don't just lock it,**

**Loop it > Lock it > ALARM IT!**
